

ALATURCA MEDICAL®
DESIGN

Alaturca Medical Inc. has been a trailblazer in the industry, leading with technical innovation and enhancing customer experiences. Our products meet the EuroNorm, IEC 60601-52 standards, MDD/MDR, and Turkish Ministry of Health regulations, and are registered in the Product Tracking System (UTS).

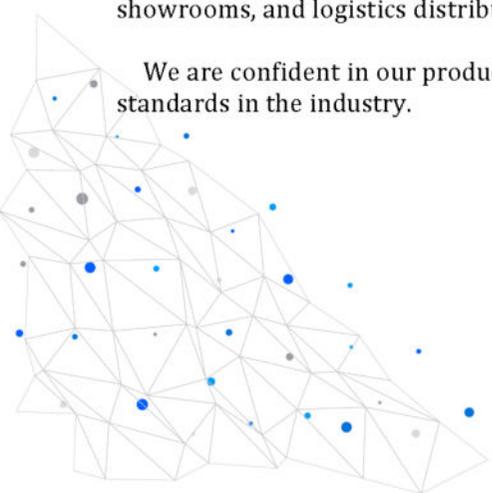

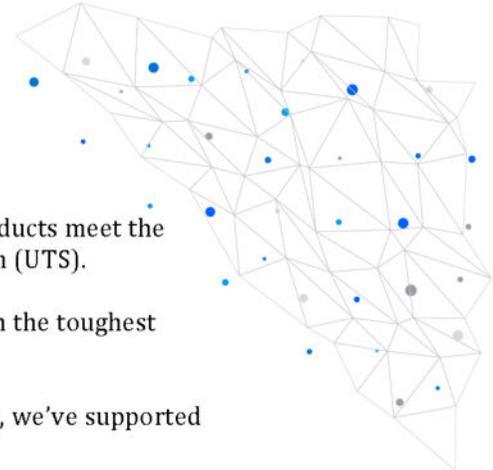

Our technical support team is ready to help our worldwide customers 24/7, ensuring their satisfaction and reducing downtime to meet even the toughest requirements.

Throughout our years in business, we've produced top-quality products. With our deep understanding of product design and manufacturing, we've supported numerous national research projects and worked closely with academic institutions.

In 2021, we opened a new manufacturing plant that brought advanced technologies into our workflow. This step-up allows us to highly customize products for any project's needs. We showcased our innovative "creative configuration" at the Medica Dusseldorf Exhibition 2021.

With the goal of becoming a global leader, we're diligently expanding. By 2025, we plan to open a second manufacturing site, international liaison offices, showrooms, and logistics distribution centers.

We are confident in our product range and our ability to support your projects—delivering them on time, within budget, and up to the highest technical standards in the industry.

Some Products

ICU HB 550 S

ICU BB 450 CS

ST 400

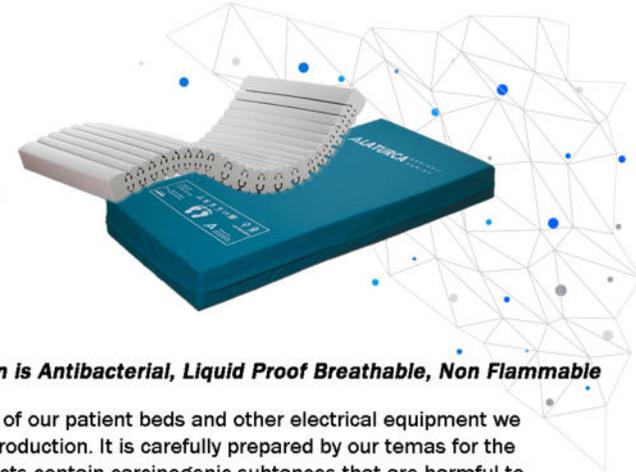

Materials Used

Plastic

None of the plastic components we use in our products contain carcinogenic substances. No waste plastics are used. Plastic materials are hundred percent Turkish made and all in antibacterial form. All of our products are ergonomic, modular, environmental friendly, patented domestic products which was developed by our R&D, biomedical and industrial engineers.

Our Leather and Fabric Used for Production is Antibacterial, Liquid Proof Breathable, Non Flammable

Apart from the motors used in the production of our patient beds and other electrical equipment we produce, all of our products are of domestic production. It is carefully prepared by our teams for the precise needs of our users. None of our products contain carcinogenic substances that are harmful to health and are in antibacterial form. You can examine the certificates of our products used in the certificates section and on our website.

Painting System

Powder coating system is used in our products and whole process is run within our constitution. This electrostatic paint provides a long life to the products. As a result of continuous researches of epoxy paint manufacturers, it has provided many important advantages to the consumer such as color brightness, texture, durability and ease of application. Thus our dyed products become more durable.

- Cleaning and pretreatment
- Powder coating application
- Baking

Electronic Actuators

Actuators offer high performance with the technology used in our current industry, which is directly linked to human health and aims to guarantee a positive approach to its users, patients and medical operators. The medical industry in general focuses on one key issue. This is of course the hygienic level. The equipment itself must be as clean and hygienic as the place where it will be located. However, misuse of the equipment or inappropriate cleaners affect the condition and lifetime of the products. Our company supplies all the spare parts. For instance as motors which provide the mobility of the hospital beds, BIBUS-a Swiss brand is preferred. Please check the related certificates.
